

RK-55

Potter's Wheels

Congratulations on your purchase of a Nidec Drive Technology potter's wheel! We trust you will enjoy many years of professional results from your wheel. Please read the entire instruction manual thoroughly before initial setup and operation. The information contained herein will aid you in operating your Nidec Drive Technology wheel safely and with excellent results.

If you have any questions regarding our product(s), call your local Nidec Drive Technology dealer.

Features and Benefits

The RK-55 offers the power, resilience and quietness that Nidec Drive Technology wheels are known for. Features includes

- •Heavy-duty steel frame construction assures long service life.
- •Unique closed loop micro- controller maintains required speed under heavy load.
- •Foot pedal offers flexibility in speed adjustment.
- Two-year warranty.

Contents Included

4×5 Wrench: 1 (To adjust foot pedal)

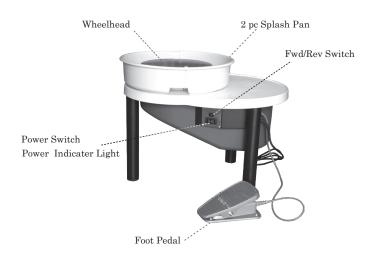

Splash Pan: 1

Foot Pedal: 1

Parts Description

[Warning]

Please start to use the wheel only after you understand the safety information and functions of the equipment.

This instruction manual provides three grades of warnings as follows. Please follow these instructions carefully.

May cause damage or injury.

Jewelry may be caught in equipment and cause damage or injury. Finger nails may be chipped or broken.

Place the wheel on a flat, horizontal surface.

Do not remove the bottom cover.

It may cause a vibration if the placement is not level.

There are electrical parts which need to be protected from hands, water and other materials.

Do not place a TV, radio, or an antenna to close to the wheel.

Cleaning and user maintenance shall not be made by children without supervision.

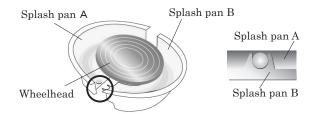

It may cause noise and picture distortion.

Splash Pan Installation

- ① Insert splash pan A into the groove under the seal flange.
- ② Insert splash pan B into the groove under the seal flange.

3 Join splash pan A into splash B

Power Connection

Please do not use this wheel with any voltage or frequency other than what is indicated.

Confirm that you have the correct line voltage and then insert power plug into the power outlet.

Do not connect many power cables to the same outlet.

May cause fire by exceeding outlet capacity.

Make sure the power switch is off when you plug the power cable into the AC outlet.

Operation Warning

Press the pedal all the way back before turning the power switch off.

The wheelhead will not move if the pedal was not all the way back at last power off.

Do not operate any switches with wet hands.

Break in the wheel according to the following procedure after setting the foot pedal all the way back before using it for the first time.

Operation Starting and Stopping

Start

1) Turn the power switch on.

③ Press the pedal forward from the stop position to in crease speed. Step backward to reduce speed.

· Stop

1 Press the pedal all the way back to stop wheelhead.

2 Turn the power switch off.

How to Switch Wheelhead Direction

· Start

1 Please check the pedal all the way back to stop position.

2 Turn the power switch on.

Power switch flash.

3 Turn on a changeover switch to select direction.

4 Press the pedal forward from the stop position to increase speed. Step backward to reduce speed.

Stop

1 Press the pedal all the way back to stop wheelhead.

2 Turn the power switch off.

How to change Wheelhead Direction

1 Please check the pedal all the way back to stop position.

The wheelhead stops when a switch is changed to CCW.

After Press the pedal all the way back and press the pedal forward, The wheelhead will be rotating to opposite direction.

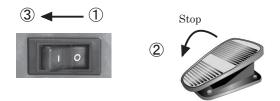

② Change the direction with a switch.

Operation Power Switch

The power switch has two functions. One is to turn wheel on and off. The other is a reset function. This wheel has a safety feature for over load. In order to reset, operator must switch off and on again. (Don't forget to press the pedal all the way down before turning switch back on.)

- (1) Switch the on switch to the off position (refer to diagram).
- 2 Return the foot pedal to the off position (refer to diagram).
- **3** Turn the power switch back on.

Maintenance

Use caution when performing any maintenance, inspection, and adjustments.

Turn the power switch off and unplug the power cable for cleaning, testing or adjustment. (It is recommended to do the same if the wheel will not be in use for a long period.)

DO NOT POUR WATER ON THE WHEEL TO CLEAN IT.

Wipe the wheel down with a damp sponge or cloth. (Splash pan can be cleaned if it is removed from the wheel.)

How to adjust tension of the belt

(When the power is low. When you feel the belt inside main body slips.)

Please adjust tension of the belt according to the following instructions:

 Stop the wheelhead by pressing foot pedal all the way back.

2 Turn off the power switch and unplug the power cord.

3 Remove splash pan and loosen all 4 bolts under the wheel head.

Caution, Please be careful not to loosen too much. Loosen bolts. Do not remove completely.

Bolts

Spring inside the main body automatically adjusts tension of the belt. 4 Fasten 4 bolts once again.

(5) Insert the power cord and turn on the power switch. Be sure to check rotating direction.

Troubleshooting

Problem Wheelhead does not turn

- •Is the wheel plugged in to the power source?
- Is the power switch in the "on" position?
- Is the power source working correctly and supplying the correct amount of electrical current?
- Is the pedal at the "0" position (heel of the foot pedal completely down)?
- Are there several wheels or other equipment/appliances on the same circuit? (Check the breaker to see if the circuit has been overloaded.)

Problem Unusual sound and vibration coming from the wheel body

- Is the wheel resting on a solid surface and level?
- •Is there too much clay on the wheelhead?
- Is the clay totally centered?
- Has the wheelhead bolt been tightened completely?
- Is it kept for a long time with no operation?

(It seems that the drive belt has a pulley-shaped bending tendency. Straighten the tendency by operating with no load and the foot pedal at the highest speed until the vibration disappears.)

Problem The wheelhead stops turning

- •Did the wheel stop turning due to too much clay on the wheelhead?
- •Did an overload cause the breaker to open at the main power source?
- Has the power cord become unplugged?
- •Did the switch(breaker) on wheel open?

Specifications

Model	RK-55
Motor	100W AC230V 50Hz single phase*
Drive System	Brush DC Motor with electric speed control
Wheelhead speed	$0\sim$ 250rpm
Speed control	Remote Foot Pedal
Wheelhead Direction	Clockwise/ Counter-Clockwise
Wheelhead	Light alloy casting, diameter 300mm
Dimension	560 × 720 × 540mm
Ship Weight	23kg
Ambient Temperature	0~40°C
Ambient Humidity	10 \sim 85%RH(No Condensation)

^{*}There are a couple of different motor specifications based on the country. Please refer to the nameplate on the product for detail specification.
